Crossing Diagonals: Lift, Turn and Trace

Separate guide. Use with the matching activity page.

Models and adult support

There is no scored right or wrong result. Use the printed route as a model.

Check the intended start, direction, stop and pencil lift. Offer a shorter session if needed.

How to support the activity

Each cross consists of two separate straight strokes. Start at either upper dot on its own line; do not turn the task into one continuous zigzag.
