One Paper, Two Shapes: Falling Test

Keep the paper, release mark and surface the same.

Use one small paper square, first flat and then loosely crumpled. An adult releases it from the same low marked height over a clear surface. Watch three trials for each shape.

An adult releases. I watch from the side.

Shape and trial	What did I see?
Flat 1	
Flat 2	
Flat 3	
Crumpled 1	
Crumpled 2	
Crumpled 3	

What looked similar or different across trials?

Something that could have affected our observations:
