One-Stroke House: Follow Every Line Once

Separate guide. Use with the matching activity page.

Answers and explanation

One valid route: A, D, E, C, D, B, C, A, B.

Every one of the eight edges occurs exactly once. Other valid orders are welcome.

How to support the activity

A and B have odd degree, so an every-edge route begins at one and ends at the other. Crossings in the middle are not additional stopping points. Many valid edge orders are possible.
