Round to the Nearest Ten with Number Lines

Answer dots locate each number; rounded tens are completed.

Round to the nearer ten. If a number is exactly halfway between two tens, round up to the next ten.

Example: 34 is nearer 30 than 40.

1. 12

Nearest ten: 10

2. 24

Nearest ten: 20

3. 35

Nearest ten: 40

4. 48

Nearest ten: 50

5. 62

Nearest ten: 60

6. 76

Nearest ten: 80

35 is halfway between 30 and 40, so the stated rule gives 40.
