Seaside Shell Grid Logic

Answer guide: each row and column uses each number once.

1. Write 1, 2 or 3 in each empty box.
2. Each row must contain 1, 2 and 3 once each.
3. Each column must contain 1, 2 and 3 once each.

The numbers tell you how many shells.

1  **2**  **3** 

	A	B	C
1	A1 **1**	B1 **2**	C1 **3**
2	A2 **3**	B2 **1**	C2 **2**
3	A3 **2**	B3 **3**	C3 **1**

One deduction at a time

1. Row 1 already has 1 and 2, so C1 is 3.
2. Column C already has a 3, so C2 must be 2. A2 is then 3.
3. Finish each column: A3 is 2, B3 is 3 and C3 is 1.

Rows go across; columns go down. A1 is the top-left box.
